with our realistic VR*
inductions produced
easily & quickly**

*Virtual reality

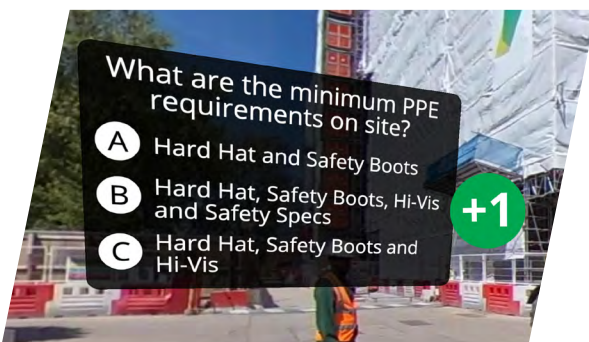

Induction training

We can make your induction training compellingly realistic and even more effective. We film at your site and create a VR world for learners to travel around in, interact with and explore - just as in real life.

Real environments

Your audience is put into your real environment so they immediately see what they are likely to encounter & learn how you want them to act.

Engaging

Understanding can be tested as people go through hazard spotting exercises, make choices and engage with animation, graphics, text and video. You can track & record their score and, if you wish, restrict access to your construction site.

Accessibility

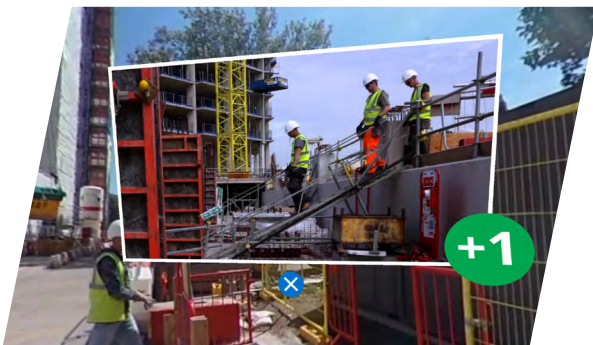

Our film-based 360VR can be accessed on any device, from a laptop or mobile phone to a headset, with no need for specialist equipment or infrastructure.

Our demo

The production process can be very quick - this short 360VR clip was shot one morning and published the following day...

Pioneers

We pioneered the use of interactive film for induction training with clients like BT, and we see 360VR as an even more compelling way of presenting your key information.

We have been creating unique resources in interactive film and VR for almost 10 years

Film based VR from £5,000
